

Children who could benefit from our services often display some of the following:

- Poor tolerance for tummy time as an infant
- Not sitting independently by 8 months of age
- Not crawling by 10 months of age
- Not walking independently by 15 months of age
- Unable to jump by 2 years of age
- Unable to balance on 1 foot by 3 years of age
- Difficulty throwing, catching and/or kicking a ball by 3 years of age
- A preference for sitting to play versus active play when at the park or playground
- Avoids swinging or sliding
- Concerns regarding safety on stairs
- Frequent tripping, falling, or general clumsiness
- Atypical gait – *knock-kneed or toe walking*
- Poor posture while sitting, standing or walking (*e.g. "W" sitting, slumped posture*)
- Poor coordination during movement tasks such as running, climbing, skipping, or hopping
- A decline in gross motor skills that had previously been attained
- Difficulty imitating motor skills or following directions
- Difficulty keeping up with peers during active play
- Complaints of pain when performing motor tasks

If you, as a parent, sense that your child is falling behind in basic skills/behavioral development or is struggling to do something they should be capable of doing or previously could do, please talk with your child's doctor or pediatrician.
